

## Product information

# Original BMW Group accessories Tire Mobility Set

### Product description

The Mobility Set ensures that the MINI or BMW vehicle remains mobile even after a puncture to the next BMW/MINI service partner. The powerful compressor together with the special tire sealing gel make it possible to seal minor tire damage.

### Details

- **Simple, intuitive operation:** Handling is included the new tire mobility set of the 2nd generation is now **much easier**, because cumbersome screwing in and out of the valve is omitted.
- **Immediate help:** The Mobility Set can be used in the event of tire damage be used on the **tread up to approx. 4mm**.
- **Many possible uses:** the set includes a powerful compressor that can be used on all MINI and BMW available tires can be used - even up to largest tire dimension.
- **Safe attachment and easy transport:** On the bag **three loops** are attached on the outside, on which the set with securely fastened to a lashing **eyelet** with a snap hook can be. The fourth **longer loop** ensures that the set, in addition to another attachment option, completely can be easily transported.
- **Simple check:** the supplied **hand manometer** shows the respective tire inflation pressure and thus offers certainty and more safety.
- **Tire inflation pressure can be easily adjusted** with the compressor be **rechecked** and also the repumping is anytime possible. A clear advantage over conventional ones Pannensprays.
- **Saves space:** thanks to the mobility set's **small pack size** it is even more compact than the previous model.
- In the event of a breakdown, the Mobility Set also ensures mobility for the **vehicle trailer**.
- Whether inflating bicycle tyres, balls or smaller air cushions, the adapters supplied can also be used in the **leisure sector** and thus ensure mobility as well as mobility also for pleasure.
- The **embroidered MINI or BMW logo** gives the high-quality nylon bag of the tire mobility set a high-quality look.

Tire Mobility Set MINI

Tire Mobility Set BMW

### comparison to the competition

- Convenient handling: the hose and cable are wound up on the side of the housing.
- Switching between filling with and without tire seals medium is very easy.
- The wide range of applications of the tire mobility set also ensures mobility and enjoyment in the leisure sector.

# Tire Mobility Set

## functionality

- In order to use the tire mobility set correctly, the Sealant hose can be screwed directly onto the valve. The Selector switch (AIR/REPAIR) is then used to fill the sealant, set to REPAIR and set up the 12V power supply. The compressor is then activated via the ON/OFF switch and the sealant is filled in.
- Once the desired tire inflation pressure has been reached, the device must be switched off. The connections are now removed and then stow the device back in the vehicle.
- **Please note the following:** If the pressure is not should be achieved, the damage may be too great and the BMW service should be contacted directly.
- After driving approx. 5km, the tire pressure must be checked again and possibly adjusted. Is the tire inflation pressure already again dropped too far, the BMW service should be prompt be contacted.

## scope of delivery
